EDUCATION

2019 - 2025

BILECIK ŞEYH EDEBALI
UNIVERSITY

- Computer Engineering
- GPA: 3.11 / 4.0

SKILLS

- Programming Languages:**
Python, JavaScript, C#
- Web Development:** React, Next.js
- Networking:** TCP/IP, REST APIs, Client-Server Architecture
- Soft Skills:** Problem-solving, Team collaboration, Fast learner, Communication

LANGUAGES

- English (Fluent)

SOCIAL ACTIVITIES

- Hackathons and Competitions
- Volunteer Work
- Workshops and Seminars
- Sports Activities

PROFILE

As a Computer Engineering student, I completed software engineering internships at Aktif Tech Teknoloji A.Ş. and MikroNet Limited AŞ, where I worked on card payment systems using Angular and C#. I gained hands-on experience in web development, TCP/IP protocols, and network communication. I also worked on NLP projects involving data analysis and modeling. I aim to build a career combining technology and innovation to create user-focused, intelligent solutions.

WORK EXPERIENCE

- Aktif Tech** 07.2024 - 08.2024
Software Engineer (Card Payment Systems)
 - Involved in software development and testing processes for card payment systems using Angular and C#.
 - Worked on both backend and frontend development for payment systems.
 - Participated in the design, development, and debugging processes of projects in a collaborative team environment.
 - Gained knowledge in new technologies and card payment systems while improving problem-solving and debugging skills.
- Mikronet Bilgisayar Ltd. Şti.** 07.2022 - 08.2022
Software Engineer (Network Programming and Security)
 - Create and manage the marketing budget, ensuring efficient allocation of resources and optimizing ROI.
 - Oversee market research to identify emerging trends, customer needs, and competitor strategies.
 - Monitor brand consistency across marketing channels and materials.

PROJECTS

- **Medical Imaging Classification Project (Normalizing Flows and CNN)** 09.2024 – 01.2025 | [LINK](#)
 - Designed and trained a Normalizing Flow model combined with Convolutional Neural Networks (CNN) to classify medical images
 - Applied data preprocessing and augmentation to improve accuracy on limited and imbalanced datasets
 - Conducted experiments to compare performance with baseline models
 - **Tools:** Python, PyTorch, NumPy, Matplotlib
- **Gift Tracking System** 09.2024 – 01.2025 | [LINK](#)
 - Developed a full-stack e-commerce platform using React, Next.js, and MongoDB
 - Implemented user authentication, secure payment integration, and dynamic admin dashboard
 - Designed a responsive UI with product search, filtering, and order tracking
 - **Tools:** React, Next.js, MongoDB, Stripe API, Tailwind CSS
- **Sign Language Translation Practice** 02.2023 – 07.2023 | [LINK](#)
 - Built a mobile application using Flutter to convert American Sign Language (ASL) gestures into real-time text and speech
 - Utilized machine learning models to recognize hand signs from camera input
 - Focused on accessibility and real-time performance
 - **Tools:** Flutter, TensorFlow Lite, Android Studio
- **Strawberry Tracking System** 09.2022 – 01.2023 | [LINK](#)
 - Developed a computer vision system to detect, measure, and count strawberries in images and video frames
 - Implemented image processing techniques using OpenCV for segmentation and object detection
 - Aimed at supporting automated fruit quality control in agriculture
 - **Tools:** Python, OpenCV, NumPy, Jupyter
